Model the two handrail corner connection pieces which are sold off the shelf in the shape editor

- The origin of both pieces should be the origin of the bolt hole where they come together.
- Vertical piece X direction should be downwards
- Aligned piece X direction should be along the handrail
- Assume reasonable values for dimensions not given
- Create a handrail pipe post and handrail (45 degrees) and make the corner connection using the shape editor pieces. Now use IntelliClone to clone this joint elsewhere.
